Above

Churchill doors and drawer fronts with eased edges and small slant inside framing beads. Wood specie is Maple with a custom paint color. Image compliments of Mainline Kitchens

Right

Cottage Grove doors and Hampton drawer fronts with eased edges. Wood specie is Hickory with a light stain.

When you pour yourself into a house, it blossoms into a beautiful home that reveals so much about you. As you are choosing those elements of your home that will combine to make it just the way you want it, it will likely dawn on you as some point that, while there appear to be numerous elements to choose from, most of them have been pre-packaged to some degree.

The journey to find the cabinetry that best suits you will be no different. Unless your cabinetry allocation allows for truly high-end custom cabinetry, chances are that the combinations of door styles and woods will be limited to only a few dozen styles, but will be dressed up to look like more by showing them in various finishes. If you want more say over the details of your cabinetry, then you are the reason why Harmony exists.

Within the realm of consumer products, it has been generally accepted that compromises must be reached between selection and value. Nowhere does that tension exist more than in building products. Over 50 years ago, our family business set out to challenge that notion.

For example, in the mid 1990's, we noticed that glazed, distressed and antiqued finishes were gaining popularity. No one thought they could be produced in an affordable manner. Our Smart Styles finish program made those fashions affordable and within a decade, every major manufacturer followed suit with their own antique finishes.

Once, inset cabinetry was considered off limits for the average budget. The prevailing thought was that the tolerances needed couldn't be met in an affordable manner. Our research said otherwise and we surprised the industry by offering affordable inset cabinetry. Several other semi-custom companies have followed suit since that time.

When we began to see an increased interest in painted finishes, we quickly recognized that having a palette of 10 or 20 standard paint colors would not be the answer for our clients. Our custom paint program proved, once again, that you don't have to pay through the nose to get what you want. Only recently, several of our competitors were still scrambling to catch up. We soon followed up with our custom stain program. Why should custom stains be limited to high-end cabinetry?

The selections you will find available to you from Harmony Cabinetry are the next logical step towards giving you almost unlimited choices. Over the years, we have noticed that a given door or drawer front may be satisfactory to a client, but it could have been their ideal choice if only a detail or two could have been changed. We also found that clients wanted the ability to mix different types of doors and drawer fronts together to achieve their own personalized style.

We have chosen to name this company Harmony because we feel that it is a perfect blend of flexibility and value.

In the pages that follow, we have set out the different elements that you can control, and have tried, where possible, to show how different details can result in different looks. As you look through these pages, please understand that we can only show a small sample of the literally millions of combinations possible. If you want to learn more about the options available to you, consider scheduling a visit with your local Harmony Dealer.

Have fun!

We have designed this catalog to be used in one of two broad methods.

If you have a general sense for what you want and don't want to bother with the details, simply look through the various pictures of doors, drawer fronts and kitchens. You might even choose to start around page 11. We have included pictures of a healthy variety of door styles and finishes. All you'll need for starters is to pick out those pictures which interest you and show them to your Harmony dealer. For even more pictures, visit our website - [www.harmonycabinetry.com](http://www.harmonycabinetry.com).

If you want to create your own door style from scratch, with every detail available to you, we invite you to take a journey through the entire catalog, starting with this page. We've deliberately included more information than normal to help guide you through the process of designing your own door style. This page shows you those aspects of your cabinetry which you will be able to determine. The remainder of the catalog gets more specific about each of those aspects. We've even provided a check sheet on the rear inside cover where you can jot down your favorite selections. Once you have a fairly good idea of what you want, visit your Harmony dealer. They will work with you to turn your choices into reality.

HOW TO USE THIS CATALOG

### Choose Your Overlay

Do you want the doors to sit inside of cabinet's front frame, as pictured here, or would you prefer for the doors to sit on top of (or overlay) the frames?

### Choose Your Wood Species

We offer 9 wood species, so that you can create a range of fashions, from modern, to traditional, to rugged and rustic. The wood species used in this photo is Cherry.

### Choose Your Finish

Would you prefer a stain or a paint? Maybe add a glaze or distress technique for an antique finish?

### Choose Your Cabinet Box

Our Premier Box? Our Ultimate Box? Since both boxes feature soft-close hinges where applicable and soft-close dovetail drawers, neither is really a compromise.

### Choose Your Shallow Drawer Fronts

Slab? Five Quarter? Applied Molding?

### Choose Your Deep Drawer Fronts

Do you want the same type of drawer front as you chose for shallow fronts, or would you prefer a different look?

### Choose your Upper Door Model

Square? Arched? Slab? Mitered picture frame look?

### Choose Your Upper Door Details

While some simple doors are stand-alone models, many doors give you a tremendous amount of control over their details, as shown below.

#### Choose the stile width

Traditional narrow stiles? Contemporary wide stiles?

#### Choose the outside edge

We offer several outside edges. Do you want something simple? Or maybe something more ornate?

#### Choose the inside edge

Do you prefer a sweeping decorative inside edge? Or perhaps a no-nonsense square inside edge? We offer several choices.

#### Choose the panel type

Would you like some sort of raised panel? Or maybe a recessed panel? How about a grooved panel?

### Lower Doors

For lower doors, you get to make all of the same choices you made for upper doors. Do you want the lower doors to be the same as the upper doors, or do you want them to be different?

When deciding upon cabinetry, the type of wood to be used is often the first consideration. We offer 9 different woods to accommodate a broad range of tastes. Some woods, such as Maple, are fairly versatile and complement both formal and casual settings. Other woods, such as Rustic Oak, lend themselves to a more focused range of fashions.

To attempt to provide you with a neutral palette for comparing wood species, we have used a transitional door style with an uncluttered center panel, paired with a simple drawer front. Once you have selected the type of wood that you feel best suits your tastes and a door style from the pages that follow, try to picture what the combination of door style and wood will look like. Also give some thought to how the wood specie will affect the color you have chosen. If you feel that the door style, wood specie and finish are that perfect combination for your home, ask if your Harmony dealer has any samples that might help you confirm your choices.

Please note that not all species are available for all door styles. For more information, please consult with your Harmony dealer. Also if considering a Rustic Wood or Knotty Alder, please be aware that door frames, face frames and moldings will not exhibit rustic characteristics, as they are structural components, nor will plywoods for Rustic offerings.

Knotty Alder

Rustic Cherry

Rustic Hickory

Rustic Maple

Rustic Oak

Cherry

Hickory

Maple

Oak

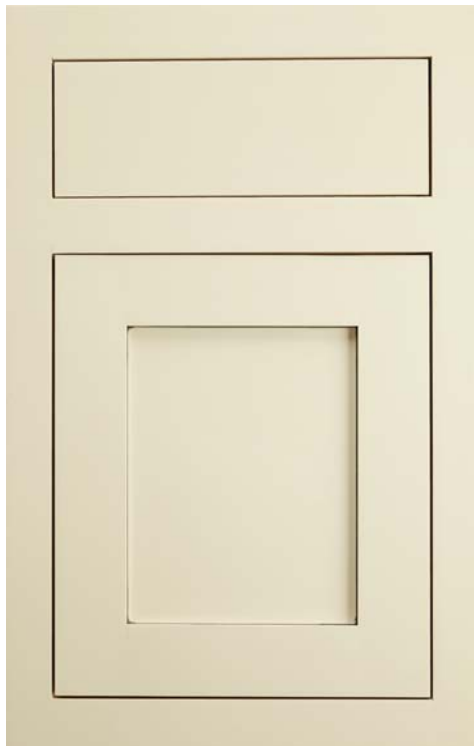

The term Overlay is used to describe the amount that doors and drawer fronts overlap the front frames of cabinets. This page and the next show how overlay has a considerable impact on fashion. Below are four cabinet fronts of the same door style and finish. The only difference between them is the overlay.

**Full Overlay**

**1/2" Overlay**

**Inset**

**Beaded Inset**

Full overlay cabinetry is versatile enough for any setting, but is often associated with contemporary styling. 1/2" overlay cabinetry is seen most in traditional settings and has been a standard for several decades. Inset cabinetry has historic roots, but has also been used extensively of late in transitional styling. Beaded Inset Cabinetry, a more ornate form of inset cabinetry, features machined beading on the front frames. This adds additional decor, as well as another highlighted surface for glazed finishes.

The images below show our four overlay options in a section of a kitchen. We've used the same door style details, finish options and accessorization so that you can see the difference in a neutral environment.

**Full Overlay**

**1/2" Overlay**

**Inset**

**Beaded Inset**

When considering traditional frame and panel cabinet doors, one aspect of the door style that the homeowner rarely gets to choose is the width of the stiles and rails of the doors (in simpler terms, the outer frame of the doors). And yet this seemingly small detail is a key architectural element. Below are pictures of both raised panel and flat panel door styles. The pictures on the left side of the page feature doors with 2 1/4" outer frames, while the pictures on the right side of the page feature doors with 3" outer frames. See what a difference it makes?

As you look through the different door styles shown on later pages, you will find that, whenever possible, we offer you a choice between narrow or wide door stiles and rails, so that you can choose the look which best suits your taste.

Flat Panel Door with 2 1/4" Stiles and Rails

Flat Panel Door with 3" Stiles and Rails

Raised Panel Door with 2 1/4" Stiles and Rails

Raised Panel Door with 3" Stiles and Rails

Outside Edge

Inside Framing Bead

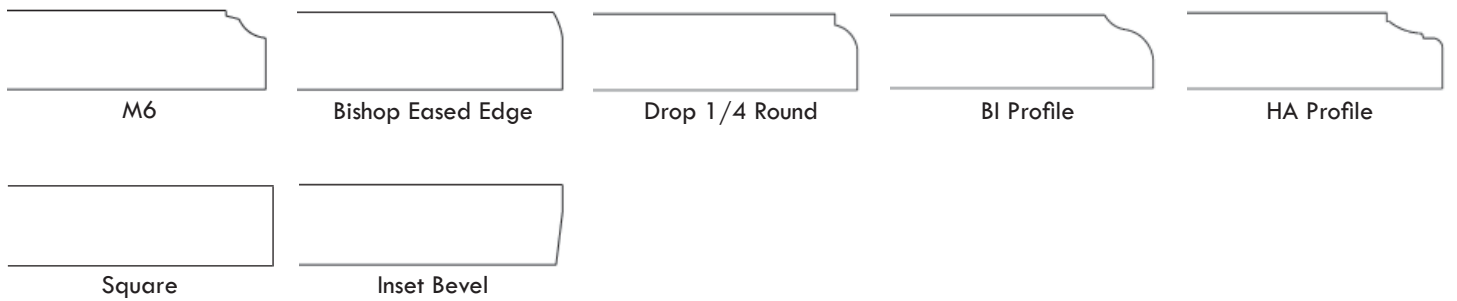

Center Panel

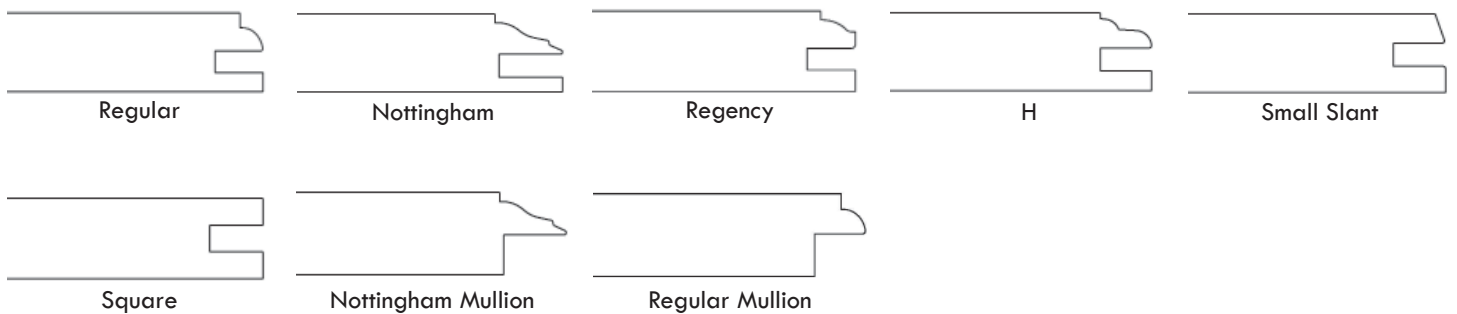

One of the things that sets Harmony apart from most cabinet companies is that, on several models of doors, you get to decide all of the individual details of the door including the overall shape, the inside framing bead, the outside edge and even the type of center panel. These key design features can make a big difference!

This page shows our offering of Inside Framing Beads, Outside Edges and Center Panels. Please be aware that not all edges and panels work for all door styles. For more information, please consult with your Harmony dealer.

 Finish: Nordic White base coat with Oyster glaze

Options Shown  
 Wood Specie: Cherry  
 Stile and Rail Width: 2 1/4"  
 Outside Edge: Drop 1/4 Round  
 Inside Framing Bead: Regular  
 Finish: Medium

Our Duotone finish option allows you to choose one finish for doors and drawer fronts and an entirely different finish for the cabinet boxes and moldings.

*Left:* A complicated application where the top cabinets and the island feature a duotone finish scheme, while the lower cabinets have a single finish.

*Right:* A desk area in a laundry room where the doors are a custom grey finish and the cabinet boxes feature a custom antiqued finish. The designer cleverly ordered two apothecary cabinets, one in each finish, then simply mixed the drawers, so that both of the finishes are used on the small drawer fronts.

### Canterbury Cathedral

Options Shown  
 Wood Specie: Rustic Hickory  
 Stile and Rail Width: 2 1/4"  
 Outside Edge: Bishop Ease  
 Inside Framing Bead: Regular  
 Panel: Reverse  
 Finish: Light stain with  
 Vanilla glaze

Options Shown  
 Wood Specie: Maple  
 Stile and Rail Width: 3"

*2 1/2" stiles and rails are standard.  
 Maple specie and flat center panel  
 are standard. Bell Gardens molding  
 has standard outside edges and  
 framing bead.*

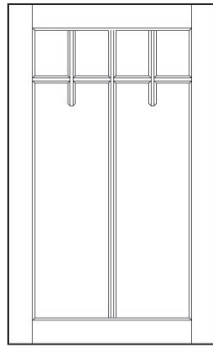

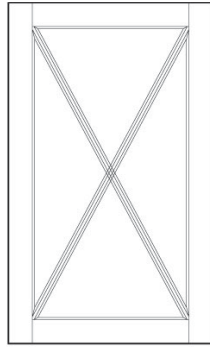

If you are looking for something a little different to create a focal point, one of these specialty mullion doors with your favorite glass might be just what you are looking for. Even though our cabinetry is considered semi-custom, we still enjoy being able to offer truly high-end accent doors. In fact, these doors are so custom that you actually approve a shop drawing of each one before they are hand made especially for you.

## DRAWER FRONT MODELS

Four drawer fronts are pictured for each model of drawer front shown on the following pages. The photos on the left side of the page are tailored for a different fashion from those on the right side of the page, to give you an idea of how versatile they can be. On each side of the page both shallow and deep drawer fronts are shown, as certain physical characteristics may vary depending upon height.

When looking at different types of cabinetry, most people pay careful attention to the doors. Though often an afterthought, drawer fronts are also a key fashion component worthy of careful consideration. That's why we offer so many choices and why we allow you the option of choosing one type of drawer front for shallow drawers and a completely different type of drawer front for deep drawers.

Below, we have taken a fairly conservative door in a traditional finish, and have paired it with three different drawer fronts. All three of these fronts reinforce the traditional feel of the door, but notice how differently each drawer front impacts the overall look. The drawer front on the left is simpler, while the drawer front on the right is more ornate. The more ornate drawer might, at first glance, seem to be a more elegant option simply because it is more decorative. Yet if you've seen some of today's transitional styles with their simple clean lines and plain drawer fronts, you've probably realized that each of these three drawer fronts can be elegant in the proper setting.

Left: Simple drawer work well even in elegant settings, as shown in this wet bar. Churchill doors and Hampton drawer fronts. Image courtesy of Diaz Distributors.

Below: Closeup view of Sorrento mitered drawer front, Amber stain with Mocha glaze

Above  
A light, airy look is achieved through the proper combination of door style design, wood and finish. Oyster glaze was applied to a Natural finish on Maple. This finish, combined with Full Overlay Bonaire doors and drawer fronts and simple Reverse panels offer some detail, but still create a clean, uncluttered space.

Left  
This kitchen strikes a delicate balance between warmth and sophistication. The traditional combination of Beaded Inset styling with applied molding Versailles doors and Buckingham drawer fronts is artfully combined with our Medium stain and Black glaze on Cherry.

## Wood Finishes

Our wood coatings consist of stains, base coats, paints, glazes, veiling lacquer and crackle lacquer. Edgewear and Physical Distress techniques are also available. Here are some general guidelines as to how the various coatings and techniques can be applied:

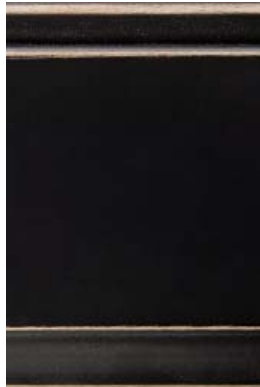

- Any of our stains may be applied to any of our woods. Stains are standard on some woods and non-standard on others.
- Any of our base coats and paints may be applied to any of our woods, except for Hickory and Rustic Hickory.
- Veiling Lacquer, Crackle Lacquer or any of our glazes may be applied to any of our stains or base coats. Some combinations are standard, some are non-standard.
- Edgewear and/or Physical Distress techniques may be applied to any of our stains or basecoats, with or without glazes.

## Hand-Applied Finish Techniques

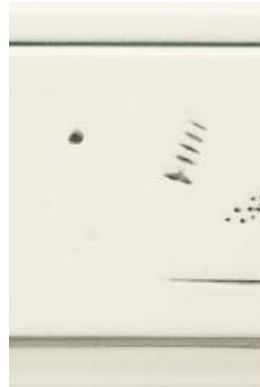

Add any combination of these techniques to stains or basecoats to create one-of-a-kind Old World finishes!

## Custom Paints and Stains

Our custom finish program allows you to work with your own favorite colors. We simply need a paint color from one of our approved paint companies or a physical sample of the paint or stain that you want. You can even combine your custom color with almost any combination of our standard finish options to create just-for-you old world finishes. Best of all, we've made it really affordable!

For more details, please schedule a visit to your Harmony dealer.

*Because printed media cannot accurately portray colors, tones and textures, a physical sample of the exact specie (where applicable), door style and color should be seen before making a final decision.*

Beautiful cabinetry that can't stand up to years of everyday use is a poor investment. That's why both of our cabinet boxes are built with such solid materials. The Premier box is our base model cabinet box, but even this box features real plywood construction, dovetail drawers with soft-close slides and, in most cabinets, soft-close hinges. Our Ultimate box is even more heavily built, with thicker plywood ends, a solid back and real wood veneer interiors with a clear finish. You really can't go wrong with either box!

**The Premier Box**

*Our base model box is comparable to upgraded boxes from others.*

**The Ultimate Box**

*Our Ultimate box is more heavily constructed than even most high-end custom boxes.*
