

Cabinet Care

Wood Finishes

- Dust - Dust often with a soft, lint-free cloth. If you wish, you may dampen cloth slightly with water or commercial spray dust remover.
- Clean - Always clean spills immediately, using a clean cloth, you may use a mild soap if necessary. Dry with a clean, dry cloth.
 - For cleaning there are several fine commercial products available. Guardsman, an excellent cleaner, is readily available in stores nationwide.
 - To remove grease buildup, Fantastik is cheap and effective. Spray on cloth and wipe cabinets quickly then rewipe with another damp cloth to remove any cleaner. Dry cabinets and apply a silicone-free polish.
- Polish - You only need to wash and polish cabinets once or twice a year. Use a high-quality furniture polish. Apply sparingly.

Please Note:

- Do not use steel wool, soap pads or detergents on cabinets or you will mar the finish.
- Do not use waxes or polishes containing silicone. Wax buildup is very difficult to remove and the residue attracts dust.

Modern Materials (TFLs)

Use a soft, damp cloth on all surfaces from time to time. For spills you may use Formula 409 or other mild cleaners.

Shelving

Our shelving has been tested by the KCMA (Kitchen Cabinet Manufacturers Association). The shelves are rated for a static load of 15 lbs per square foot, evenly distributed. In order to achieve this rating, shelves in cabinets 30" and wider must be braced with a screw-in shelf support, after the consumer has adjusted them to their desired positions.

Because the consumer ultimately decides where to position adjustable shelves within the cabinets, the consumer is responsible for installing these supports, and for making certain not to exceed the load rating.

If you need shelf supports, or have any questions about shelf supports or shelf load ratings, please call us at 800.410.2444.

Preventive Care

Self-Cleaning Ovens

Finishes of cabinets which have been installed adjacent to self-cleaning ovens are at risk from escaping heat if the oven's heat gasket has failed. During an oven's cleaning cycle we recommend you remove all doors and drawers from cabinets which are above, below and beside the oven. Damage caused by heat voids the warranty.

Heat-producing Appliances

Coffee makers, toaster ovens and similar appliances are best not placed underneath cabinets where the heat and moisture they produce may cause damage to cabinet finishes.
